# Food industry production line up

## Film Greenhouse

multi-span film Greenhouse, also known as agricultural plastic poly film greenhouse. All this greenhouse is made with top quality aluminum frames and top-quality anti-PEP film. It is the ideal application for single or double layer.

## Hydroponic Growing System

### Strawberry Gutter for Greenhouse

## Multifunction Automatic Control

This system consist of weather station, sensor, master control and microcomputer. The weather station and sensors collect environmental factors such as temperature and light intensity and feedback to computer, then the computer controls facilities such as window opening, film roll-up, cooling and heating according to set parameters,

## PC Greenhouse

PC board, namely widely used in greenhouse construction, PC board is usually double or triple hollow transparent plate or a single wave plate. PC board high light transmittance, good sealing, good impact strength, good insulation, is the best kind of all covering materials overall performance. Greenhouse class can widely use, not regional restrictions

Glass greenhouse and plastic greenhouse are commonly use. Plastics mostly used PE film and multiwall sheets of polycarbonate material. Commercial glass greenhouse is often the production of modern high-tech. It must be filled with all facilities to support the greenhouse operation, such as the heating, cooling system, the maintenance equipment, irrigation equipment, the lighting and shading systems and automatic control system which is the central intelligent part of this kind greenhouse.

## irrigation equipment

There are several irrigation systems to choose from which can be daunting. You need to select the type that suits your own needs the best. This includes the size of your greenhouse, the type of plants, and how much time you have to invest into gardening.

## circulation fan & heater
